WINTER AVERAGING ADJUSTMENT REQUEST

Sewer Consumption Average Form

Each year, the city takes your average water use for October, November, and December to calculate your wastewater usage for the year. Typically, water use is the lowest this year due to little or no outdoor water use.

Therefore, watch your bills to determine the approximate date your meter is read each month. For example, your average wastewater calculation will start on the day your meter is read in November and end on the day your meter is read in January. Also, if you had a leak (homeowner's side of the meter) or filled a pool during the winter months, please complete this form to review your monthly consumption.
